## DESIGNER TOWER FAN TVE 39 T

High-quality tower fan with comfort functions

### Fresh breeze and smart look

An elegant eye-catcher in black and white: In terms of style, comfort and quality, the tower fan TVE 39 T decisively creates visual highlights. Whether in living room or bedroom, at work or yoga sessions, in sales rooms or in a café – the slim refreshment dispenser guarantees pleasant cooling on hot summer days.

### Performance, quality and comfort forming a perfect trio

With its fan power of 45 watts and 6 fan stages, the tower fan TVE 39 T always provides for the optimal amount of cooling fresh air. Powerful wind or gentle breeze – set the wind force to a level that is the most pleasant for you. The optional on-demand 60° oscillation function renders the tower with 108 cm of height suitable for large scale air circulation within the room. Ideal for blowing the room air which has heated up all day out of the window fast as the wind, or for evenly distributing cool breezes throughout the room.

Depending on your personal preference, you can adjust the air exhaust intensity to your individual requirements by using the 3 operating modes "Normal", "Natural wind" and "Night mode". Even more comfort is provided by the quietly running tower fan offering a remote control, a timer function for the time-controlled switch-on and -off, a recessed carrying handle and a convenient memory function for automatically saving the most recently used operating mode selection.

### The slim alternative to a pedestal fan

Unlike conventional pedestal fans with rotor, the functional principle of the compact tower fan TVE 39 T is based on a fin construction that revolves around itself. The room air is sucked in, swirled around within the device and blown back out into the room along the entire height of the device front.

This ventilation technique produces an intense cooling effect noticeable on the skin and the stable pillar design makes the TVE 39 T a space-saving and stylish fitment in modern living or office spaces.

### Advantages of the TVE 39 T as compared to conventional fans

- Tower fans of the TVE series do not just emit the cooling air selectively at one point but vertically along the entire height of the device. With its height of 108 cm the TVE 39 T is excellently suited for a thorough and extensive ventilation of the room. The on-demand 60° oscillation function distributes the blown-out air current widely.
- In case of standing desks or desks accordingly adjusted in height the air flow emitted by the TVE 39 T stays beneath the tabletop, leaving the paperwork on top undisturbed.
- Since the model has no rotor blades, the associated risk of accidents in households with children and pets is also nothing you need to concern yourself with.
- The TVE 39 T impresses with its space-saving design. The slim pillar shape harmoniously blends in with any living environment.

### Cooling with convenience

Comfortably control the TVE 39 T from your seat. All functions and settings cannot only be made directly at the device but also by means of the remote control – without even leaving your seat.

### Timer function – for automatic switch-on and switch-off

Using the practical 12-hour timer you can schedule the switch-on and switch-off times of your tower fan just as desired. Simply adjust the duration until automatic switch-on or switch-off of the fan in increments of 0.5 hours. It can be very useful when the fan has previously set to start running before you enter a room. And in order to not forget switching the fan off at night, you can simply predetermine the time for automatic switch-off.

### Natural wind mode – enjoy gently wafting breaths of air imitating nature

The "Natural wind" mode provides a nice change: the fan's variation intensity varies automatically. The intensity of the air current is alternately increasing and decreasing – comparable to a natural breeze at the sea. The smooth gusts of wind are especially pleasant on the skin and provide a good alternative to the permanent air current.

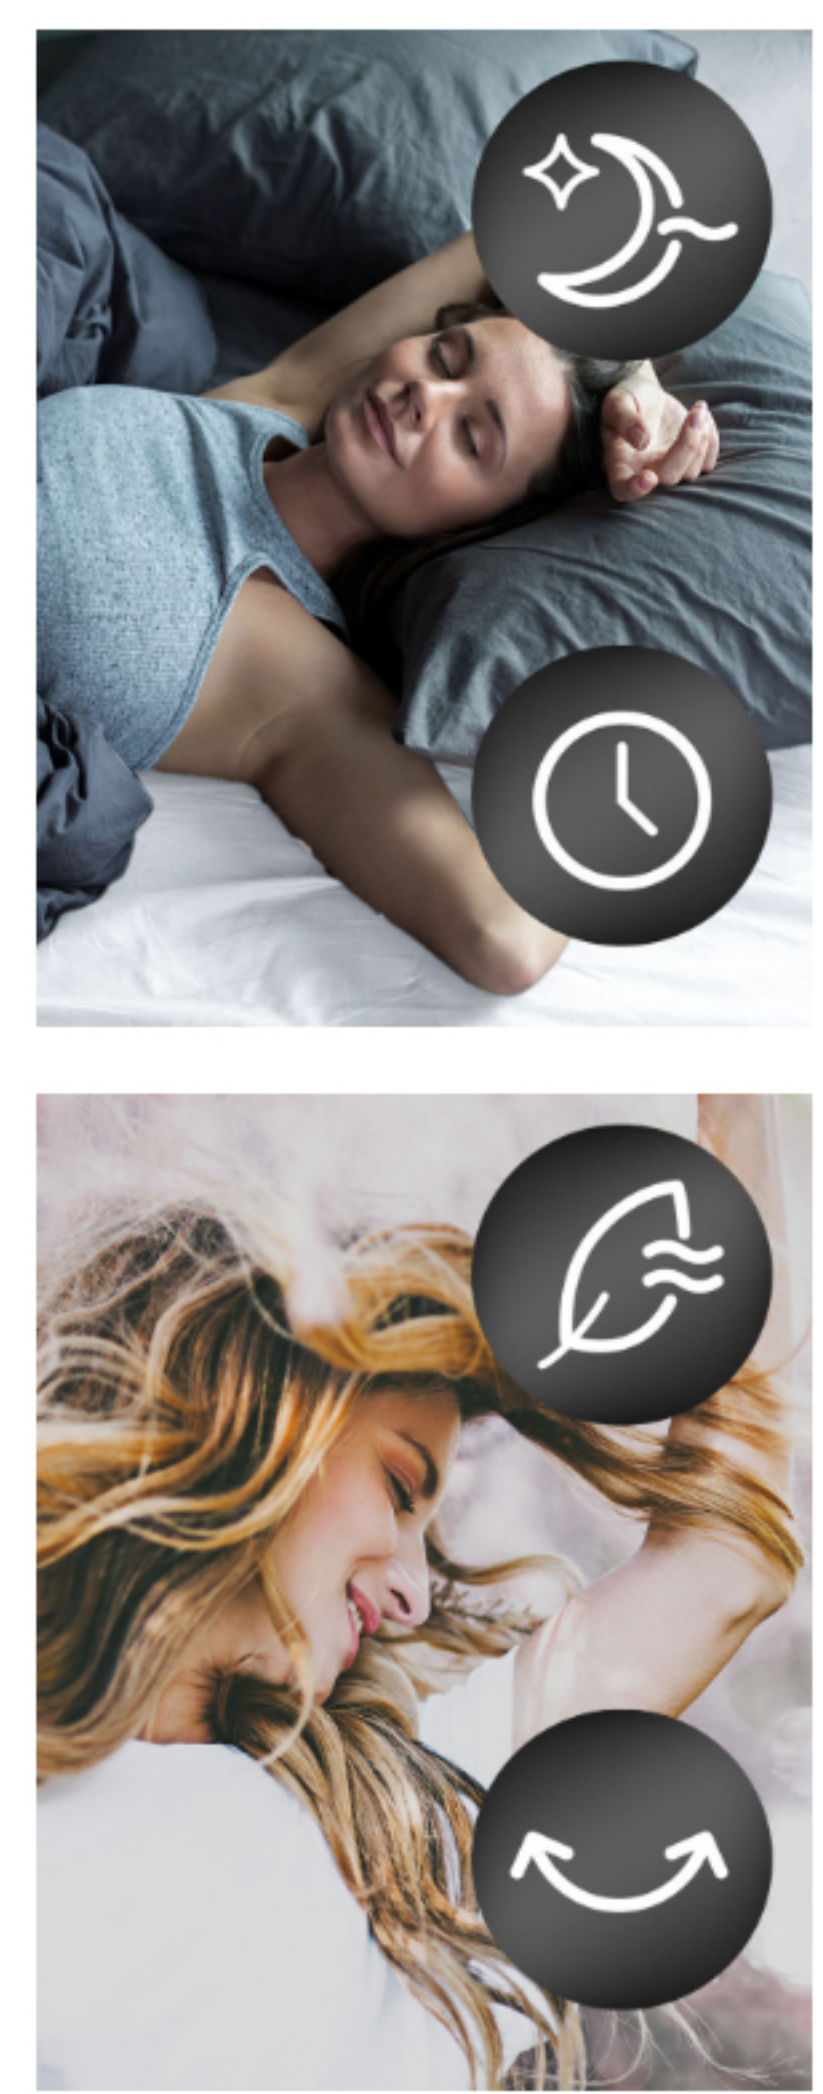

### Night mode – gentle cooling for a restful sleep

With its night mode activated the TVE 39 T ensures that starting out the air flow will have a cooling effect in the selected fan stage. After 30 minutes the output will automatically be reduced to the next lower level. At the lowest and quietest speed level the fan emits a gentle breeze cooling the room all night long – provides restful sleep at pleasant temperatures. **Hint:** Additionally utilize the timer function to automatically switch off the device during the night.

### Swing function – 60° oscillation

The automatic swing function provides air circulation throughout the room. It makes the internal fan body swing (oscillate) automatically from left to right, which results in the cooling breeze distributing in an optimal way.

Using the high-quality tower fan TVE 39 T you can enjoy the summer to the full – defying the heat in style and comfort.

### Special equipment features of the TVE 39 T

Compact dimensions: the designer tower fan TVE 39 T is 108 cm high and 30 cm wide. It comes with 6 speed levels and 45 watts of power.

The automatic, on-demand 60° oscillation distributes the fresh air evenly and effectively in the room.

With features such as time-controlled switch-on and -off, natural wind function and night mode this high-quality tower fan offers agreeable and convenient cooling comfort.

The high-gloss surfaces emphasize the high-class overall impression of the TVE 39 T. The modern design blends in perfectly with your living environment.

Conveniently control all functions of the TVE 39 T by means of the slim infrared remote control.

All the settings can also be made intuitively using the buttons neatly arranged on the control panel.

The modern LED display indicates the selected operating mode and the set parameters. For the purpose of visualization the above illustration depicts all the existing display icons at once.

Convenient, handy and light with only 5,500 g: Owing to the recessed handle the TVE 39 T can be repositioned fast as the wind.

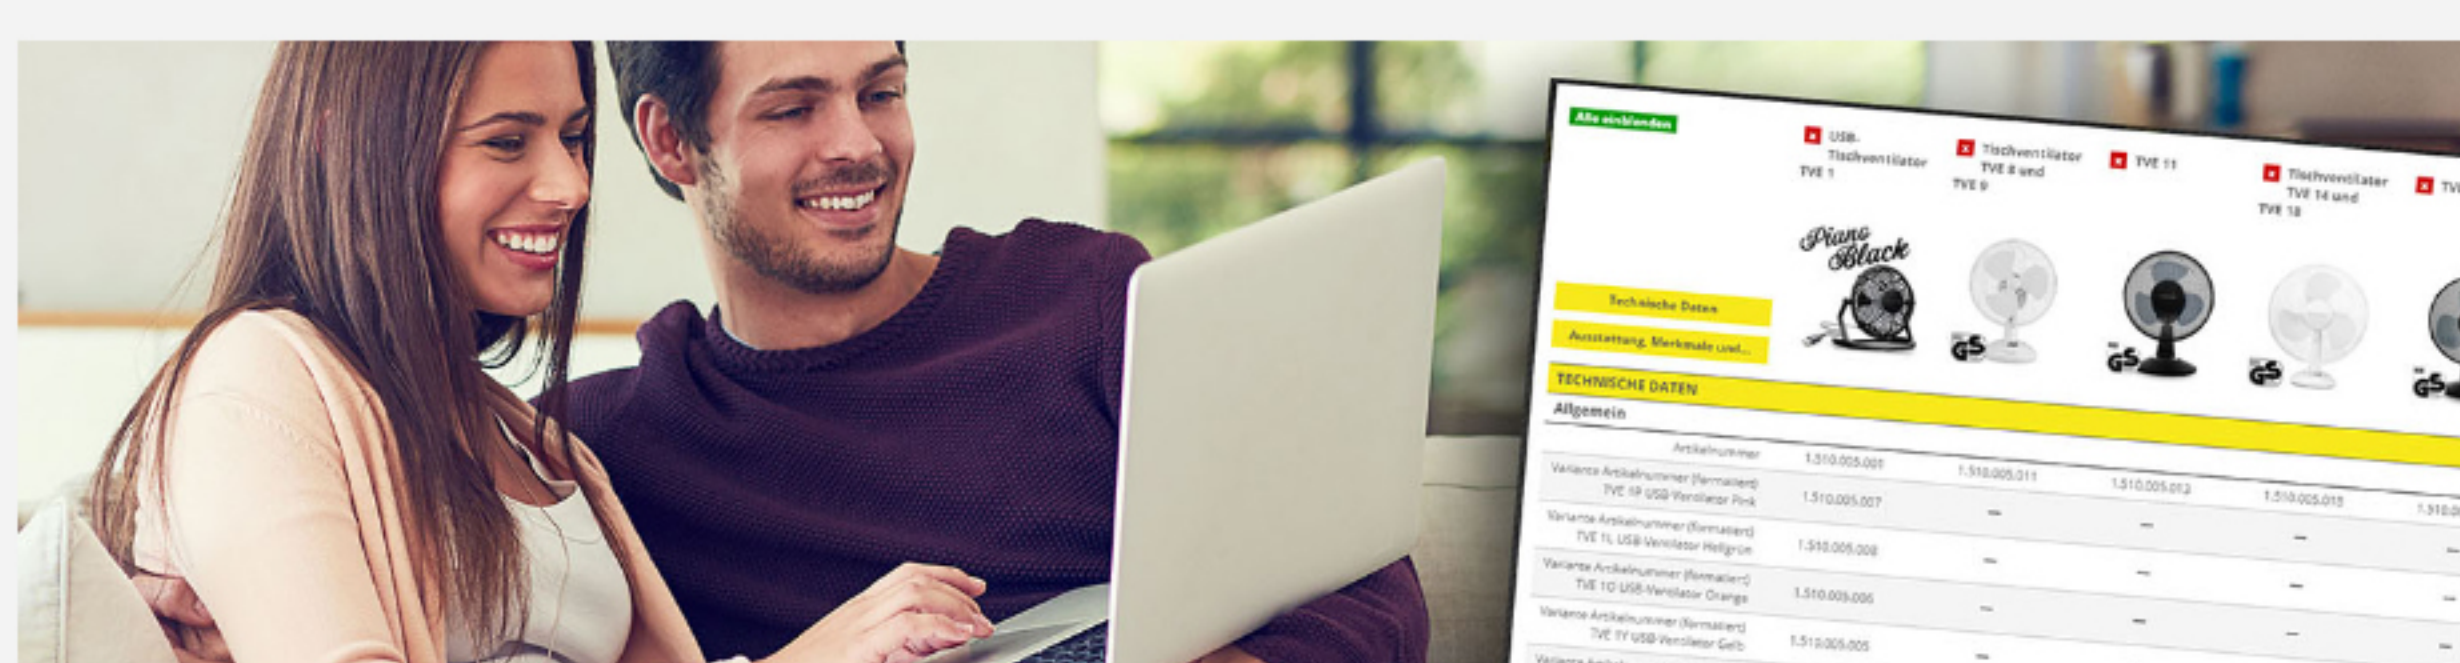

### For an agreeably fresh breeze wherever it is needed ...

Whether in living spaces or in the bedroom – the TVE 39 T introduces fresh air and cool looks to the room.

Stay fully focussed and productive at work. On hot days, the stylish TVE 39 T brings soothing refreshment and a welcome breeze to your office.
