DESIGNER PEDESTAL FAN TVE 26 S

A class of its own – why not have high demands on quality and climate comfort

5 operating modes and timer function for the little extra of comfort

Not all fans are the same. With 26 fan stages and five different operating modes the modern, high-quality, 30 W pedestal fan TVE 26 S of the TVE series can supply first-rate refreshment. It even looks fresh – for the elegant, high-class housing design blends in beautifully with modern living or office environments.

Tailor-made refreshment meeting your individual requirements

What degree of cooling would you find agreeable? Would you prefer a strong, head-on air current that provides proper cooling? Or rather a mild, fresh breeze that blows gently through the room? Or maybe just a subtle breath of air softly distributed in the room over night? For the pedestal fan TVE 26 S and its five operating modes: it's a breeze. During normal operation the fan runs constantly at the desired fan stage which can be adjusted from level 1 to 26. In the "natural wind" mode the fan speed alternately increases and decreases creating a natural, agreeable air flow. Night mode ensures perfect sleeping comfort due to the optimally regulated air movement. After a while the device automatically reduces the fan speed.

The TVE 26 S can conveniently be operated via the infrared remote control. Without difficulty you can regulate the fan speed, change the mode of operation, activate or deactivate the oscillation function and control the timer. All settings can be made intuitively using two buttons and a setting wheel. The changes will be clearly indicated on the large and neatly arranged LED display.

When standard doesn't make the cut, the TVE 26 S can score with diversity

Particularly smart is the comfort mode. The device automatically measures the ambient temperature. Should it be below 20 °C, the pedestal fan TVE 26 S automatically switches into standby mode. Both ventilation and oscillation will be deactivated. When the ambient temperature exceeds 20 °C, the device switches back on from standby. For the application in particularly noise-sensitive surroundings the TVE 26 S is further equipped with a whisper mode.

Precise alignment for perfect cooling

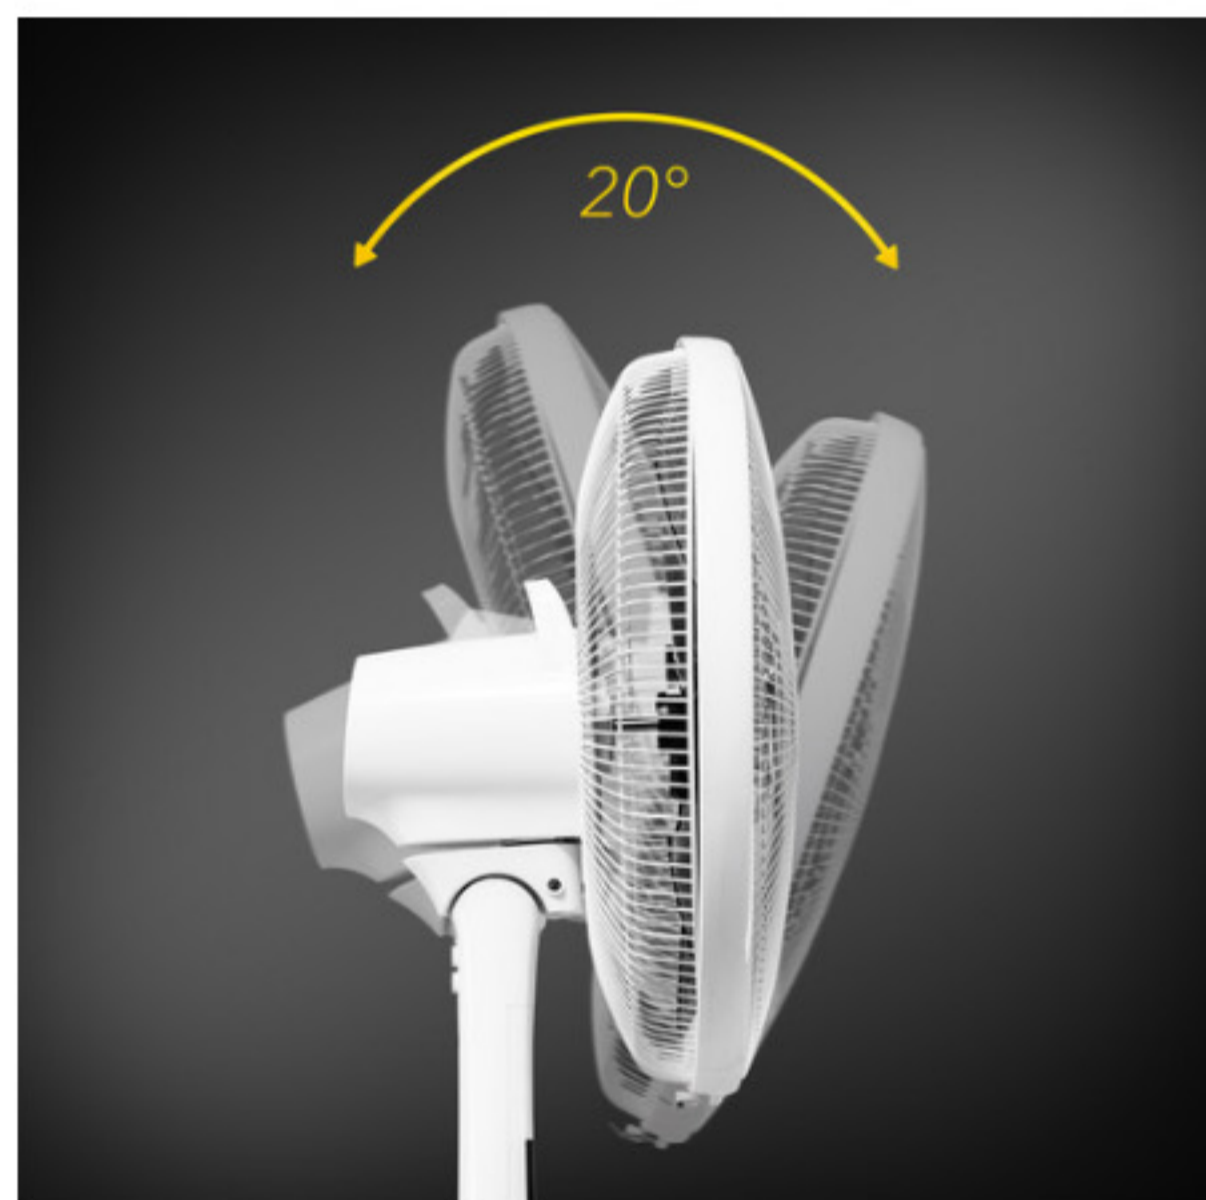

Adjust the air current just as you please. The automatic 85° oscillation with switch-off function and the fan head inclinable by 20° render the TVE 26 S a flexible partner for all ventilation applications. It can be steplessly adjusted in height between 120 cm and 137 cm and its light weight and the convenient carrying handle make it very easy to transport. Due to the stylish and tilt-proof round base the TVE 26 S doesn't even begin to totter even at the highest speed level.

Well-being created at the push of a button – even fully automatically should you so desire

Coming home and feeling good at once: It works using the pedestal fan TVE 26 S and its integrated timer. The device can be adjusted to switch on and off automatically based on a previously set number of hours. It can range from 0.5 to 12 hours.

If you grant the fan a little lead time, you will be welcomed home after work by a fresh breeze. And don't worry if you doze off whilst relaxing on the couch. With the extremely economical power consumption of only 30 watts no objection shall be made for financial reasons regarding a continuous operation in the summer. Provided you have previously set the timer, the device will be switched off automatically. How convenient!

High functionality down to the last detail:

Precise alignment: The inclination angle of the fan head can be adjusted by up to 20°.

Easy to handle: 5 operating modes, timer function, 26 speed levels and oscillation function.

Flexibly adjustable: Infinitely variable height adjustment between 120 and 137 cm. Eye-catching: The high-grade exterior of the pedestal fan TVE 26 S adds fresh highlights to the room

Refreshment reaching every corner: Automatically oscillating by 85° with switch-off function

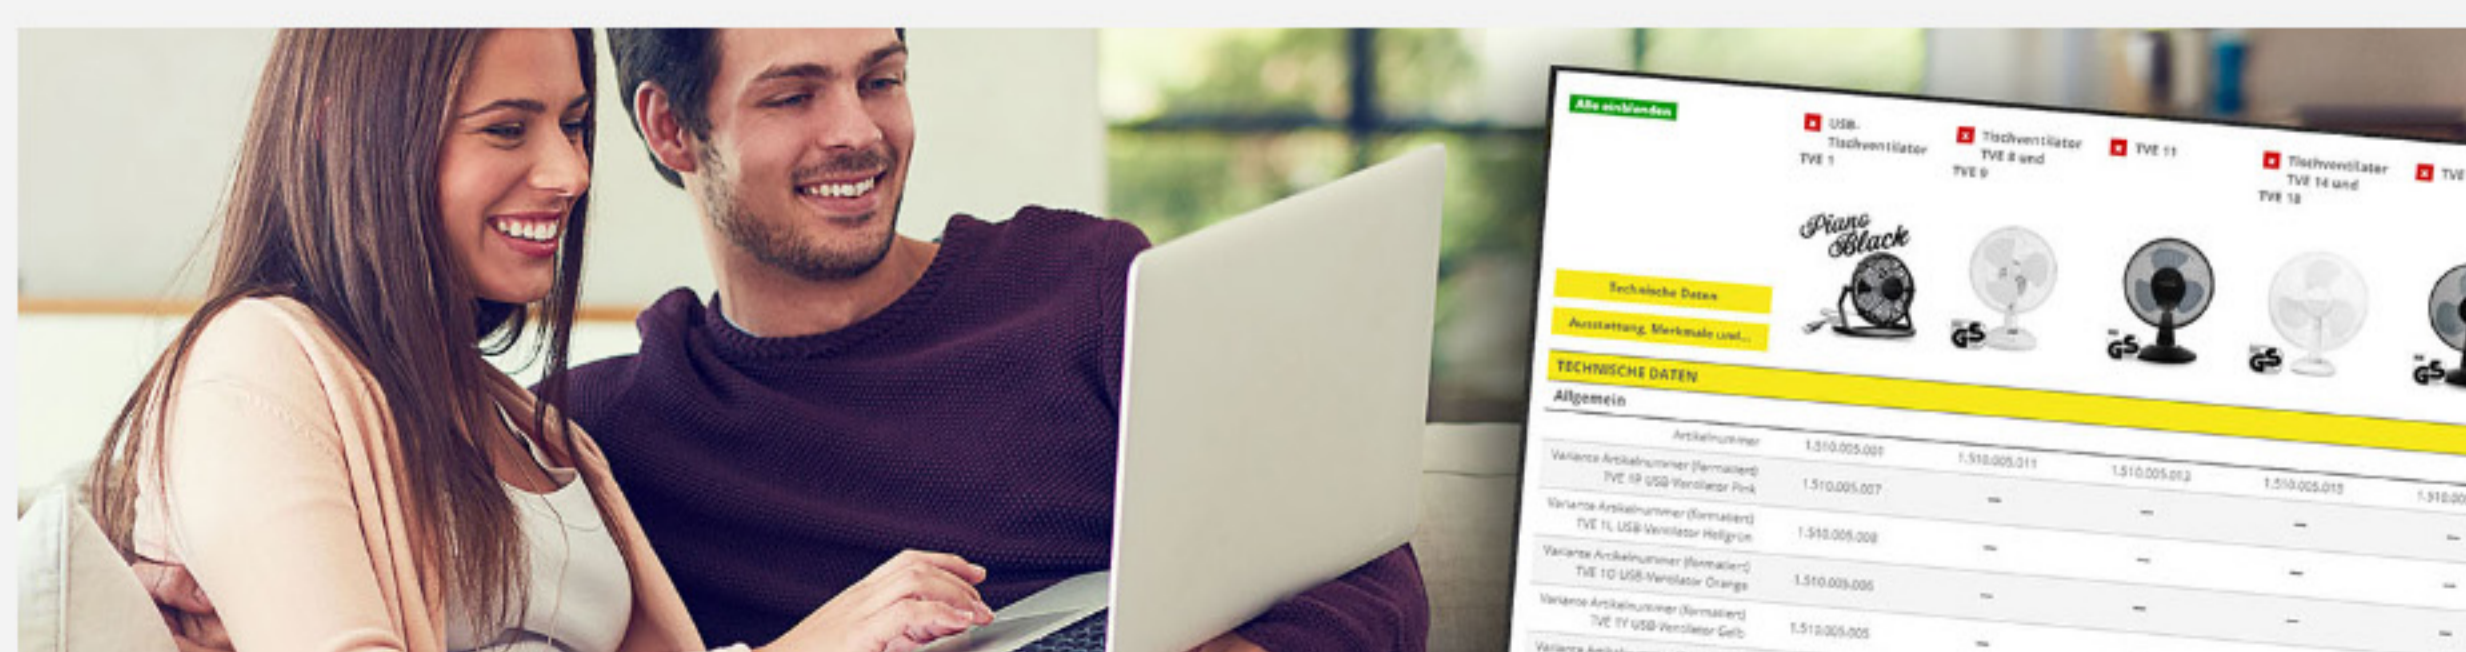

For an agreeably fresh breeze wherever it is needed ...

Cooling in style: Deliberate cooling in the office can clear your mind to increase the productivity.

In the summer a fresh breeze can do a world of good – both indoors and on the terrace.
